XR-3000 Series Shielded Search Coil

UNDER CONVEYOR COIL

MDI's XR-3000 is the proud successor to the renowned T-Series Under Conveyor System, the workhorse of under conveyor metal detectors for over 20 years. Nearly identical in outside appearance to its predecessor, the XR-3000 Search Coil boasts an entirely new internal design. Powered by our latest XR-9 Digital Technology, this system represents MDI's latest advancement in CB radio filtering and AC noise rejection, giving you greater stability, less false tripping and better maximum sensitivity. With all of the environmental electrical noise in today's industries, you need a system that can handle the interference.

Detects Magnetic and Non-Magnetic Tramp Metal

Highly Resistant to all Radio and Electrical Interference

MDI's Exclusive Premium Extended Service Plan -Best in the Industry-

The XR-3000 system and its respective components have been designed to retrofit into all previous existing MDI analog under conveyor metal detector systems.

Full 3-Year Warranty

50 Years of Experience

Thousands of Metal Detectors Worldwide
